Colwell Systems Four PlateStreams Steadily Business for 7 Years

As Seen in: **PRINTING VIEWS**

Colwell's Frank Kearns, Jim Kreie and Bill Bailey stand with one of the firm's PlateStream Platesetters.

Printware installed four PlateStream Platesetters at Colwell Systems, a subsidiary of Patterson Dental Company in 1997 timeframe and have been producing consistent productive work ever since.

Bill Bailey, Colwell's Production Manager, said positive experiences with the systems:

“We’ve been very pleased with the quality, speed, and reliability of Printware’s equipment. We have run and will continue to expect our PlateStreams to serve our printing needs for many years to come.”

The PlateStream, a computer-to-plate system that images, punches, processes, dries and cuts plates to length, is targeted at a broad range of 2-up and 4-up, single-color, spot-color, and process-color printing. At two plates per minute, the system is one of the fastest in its class. It images full-bleed two-up images on 4-mil to 8-mil paper or polyester media, such as Printware’s SilverStream.
